

Activity 1. What Kind of Claim Is This?

Consider the following statements about AI

- “AI will eliminate a large number of jobs.”
- “Students should be allowed to use generative AI for schoolwork.”
- “Employers are increasingly using algorithms to evaluate job applicants.”
- “AI companies should have to disclose what data they use to train their models.”
- “A handful of technology companies control access to the most powerful AI systems.”
- “AI tutors could make high-quality education available to more people.”
- “Doctors should remain responsible for final medical decisions even when an AI system is more accurate.”
- “Generative AI is making people less creative.”
- “Schools should prepare students to use AI rather than prohibit it.”
- “Technology companies currently make many decisions about what their AI systems will and will not do.”

Instructions

Choose several statements to analyze.

1. Categorize the claim as...

- **Descriptive / predictive** – a claim about what is happening, what a system can do, or what might happen?
- **Normative** – a claim about what should happen, what is desirable, or what is acceptable?
- **Political / institutional** – a claim about who has power or authority, who gets to decide, or how decisions are made?

Some claims may belong to more than one category.

2. Look underneath the claim...

- **Evidence:** What evidence would we need to evaluate the descriptive or predictive claim?
- **Values:** What values or assumptions are shaping the normative claim?
- **Power:** What actors, institutions, interests, or power relationships shape the political / institutional dimension?

3. Discuss

- Which claims sound factual but actually depend on a value judgment?
- Which claims are presented as inevitable when they are actually the result of **choices and power**?
